

Accessible Toilet Refurb Beckers Green Primary School Mitie Projects

The Department for Education (DfE) guidance requires schools to provide accessible personal care facilities strategically located across the premises. Schools built before this mandate have had to alter existing areas to comply. At SDE, we have a wealth of experience in modifying spaces to fulfill our clients' changing needs, which led to our appointment for the installation of a new accessible toilet at Beckers Green.

Refurb Plantroom | 35m2 New Acc Toilet | Access Fittings and Fixtures

This was the second accessible toilet refurbishment of 2023.

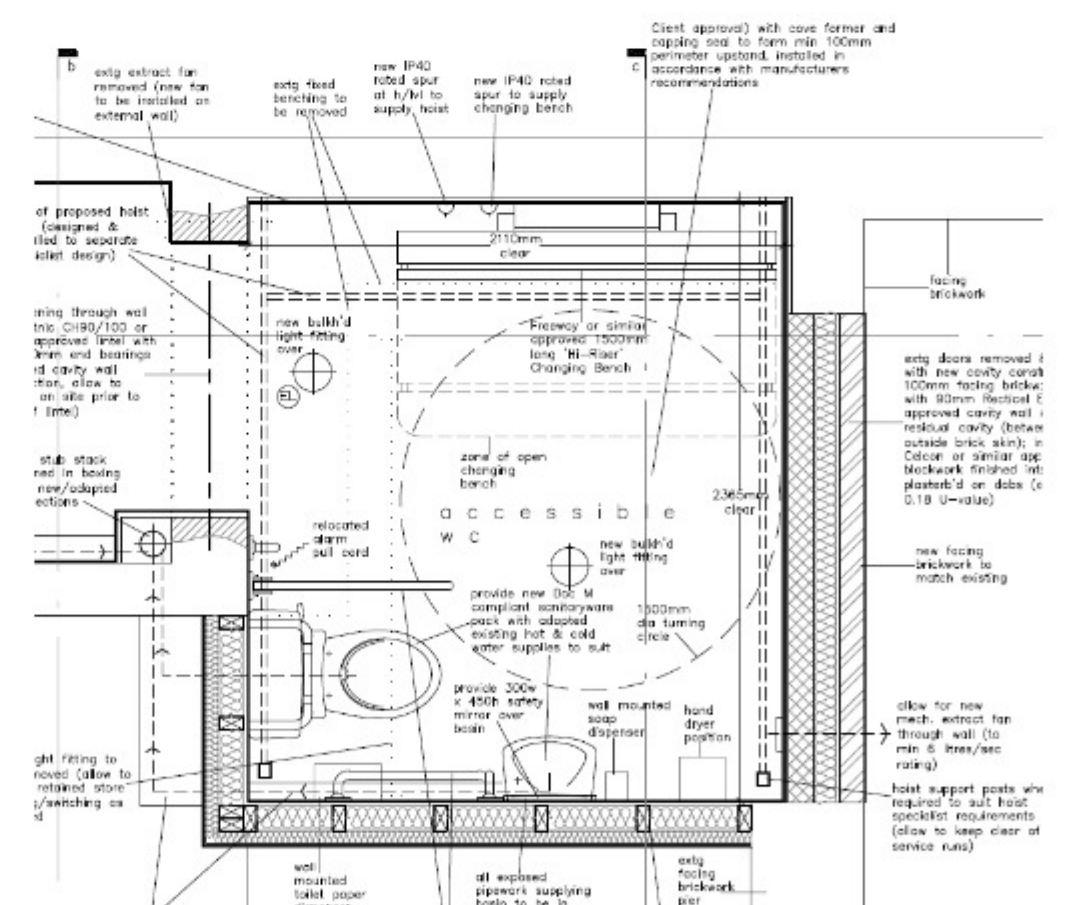

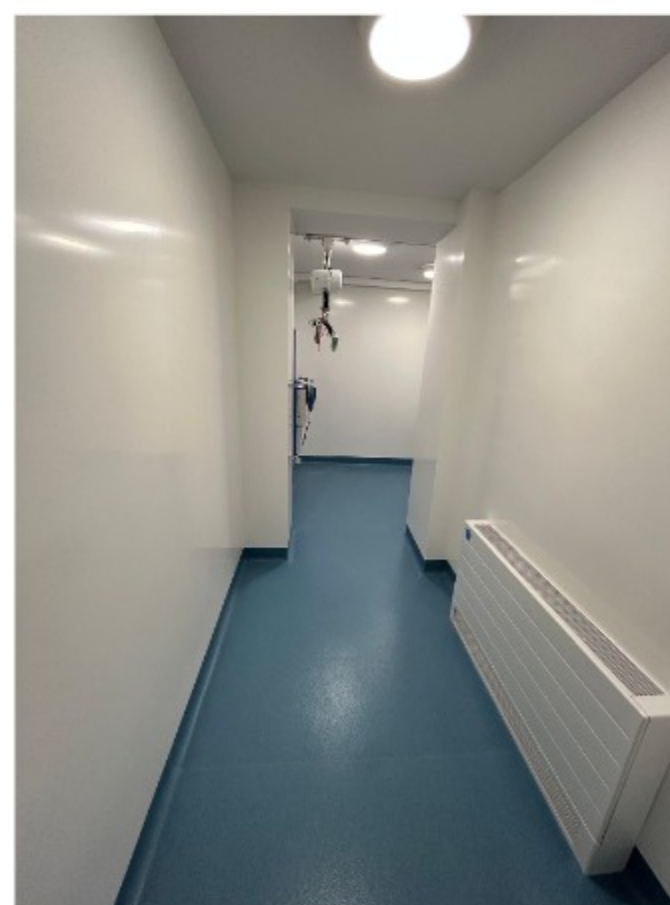

The deadline for the work was strict, requiring completion during the summer holidays to prepare for the new academic year, catering specifically to a student who would use these facilities.

We reinforced the existing external wall with new lintels to create openings into the new space.

The space needed to be easily maintainable, so walls were fully clad with Whiterock and a continuous vinyl floor was installed.

As with all our projects, we provided a comprehensive solution, replacing the suspended ceiling with a new one and enhancing it with low-energy LED light panels.

Our team went above and beyond to assist the school in meeting their intake commitments, finishing on time and maintaining a positive working relationship throughout.
